### Introduction

Business Analysis is essential in identifying business needs, solving problems, and enabling change. This foundational course introduces the core concepts, tools, and techniques of business analysis. It equips professionals with the skills to define requirements, assess solutions, and work effectively with stakeholders across business and technical domains.

### Objectives

By the end of the course, participants will be able to:

- Understand the role and responsibilities of a business analyst
- Identify and gather business requirements effectively
- Analyze processes and systems using BA tools
- Model requirements and propose solution options
- Support solution implementation and validation

## Why Attend

- Get a structured understanding of business analysis practices
- Improve your problem-solving and decision-making abilities
- Communicate effectively with both technical and business stakeholders
- Lay a solid foundation for pursuing advanced BA roles or certifications

## Target Audience

- Aspiring Business Analysts
- Junior and Mid-Level Analysts
- Project Team Members
- Product Owners and Managers
- Professionals transitioning into BA roles

## Individual Benefits

- Acquire a recognized business analysis toolkit
- Increase your professional value and adaptability
- Improve communication, analysis, and documentation skills
- Boost your confidence in cross-functional projects

## Organizational Benefits

- More efficient business process improvements
- Better alignment of project outcomes with business goals
- Enhanced team collaboration and stakeholder engagement
- Reduced rework and improved project success rates

## Instructional Methodology

- Facilitated sessions with real-world examples
- Interactive exercises and case studies
- Hands-on workshops for requirement elicitation
- Group work and role-play
- Tools: SWOT, BPMN, Use Cases, RACI, MoSCoW

## Course Outline
