## Introduction

In today's interconnected and unpredictable global marketplace, supply chains are increasingly exposed to disruptions such as geopolitical conflicts, economic volatility, cyber threats, and natural disasters. Effective risk management is no longer optional—it is essential for business continuity, resilience, and competitive advantage.

The Certificate in Risk Management & Supply Chain Vulnerability course equips participants with the knowledge, tools, and techniques to identify, evaluate, and mitigate supply chain risks. It provides a structured approach to building resilient supply chains capable of adapting to uncertainty while maintaining operational performance. Participants will learn best practices in risk assessment, contingency planning, crisis response, and supplier resilience. Through real-world case studies and practical frameworks, this program prepares professionals to turn risk management into a strategic advantage.

## Objectives

By the end of this course, participants will be able to:

- Understand the principles of risk management and supply chain vulnerability.
- Identify and assess internal and external risks affecting supply chain performance.
- Develop and implement effective risk mitigation and contingency plans.
